Gloria - please post this. Thanks.

From: blorch@pm23 on Mon, Jan 15, 1996 6:39 PM
Subject: technical seminar
to: r_d@pm23
File(s): an overview of cellular immunit

The following technical seminar has been scheduled for January 24, 1996:

ENDO - FRIEND OR FOE?
III. THE MIGHTY MACROPHAGE

by
Walter Hempfling
Wednesday, January 24 1996
2:30 p.m.
Lecture Hall

This presentation continues our discussion of the various actions of nitric oxide, nitric oxide synthase (iNOS); consequences of overproduction of NO; mechanisms of cellular toxicity.

Subject: RE: Nicotine transfer
To: Seeman, Jeff

2057068762C

I reviewed these studies with John when the white paper was written. This was some of the experimental evidence we had to make the statement in that paper.

Cathy, FYI . . . as part of Jay, John P. and I reviewing the nicotine/TGA paper, we asked John Lephardt if he had performed any evolved gas analysis studies of nicotine evolution from tobacco. He has, many years ago; and he just faxed to me some of the results. The spectroscopic monitor is one of the the N-methyl group in transitions; there is some interference with other molecules having in transitions with the same frequency. At any rate, it appears that nicotine is evolved at ca. 200 degrees, consistent with the TGA "evolution" of protonated nicotine. I have a few more questions about these results, but they are sufficiently interesting I thought you would like to hear of them. Jeff

John Lephardt -- Good job! Thanks.
